COMPANY PROFILE

From conception of design to shipping, quality control in all aspects Easy and efficient installations for maximum satisfaction.

Well-known across the globe for manufacturing and exporting terracotta tiles, Skyrex Tile is synonymous with quality. A proud "Made In India" Company, our traditional designs are embedded into modern manufacturing practices. We manufacture an array of terracotta tiles, such as decorative tiles, jaali tiles, and roofing tiles

We harbour more than six decades of experience, and has consequently led to a customer base that consistently asks for OUR TERRACOTTA PRODUCTS in the market.

From conception to desian. each tile is created with love and care. We ensure quality control in every aspect of the manufacturing and shipping process.

Terracotta Products Made With 100% Natural Clay

You heard that right! Our products are made with 100% natural clay. This clay is sourced directly by our artisans who have years of experience in creating high-quality products. Our earthenware products are built to last and contain no binding agents. We remain 100% true to our promise of offering authentic_ natural clay products.

CERTIFICATE

Benefits of clay Roofings

Clay roof tiling can provide homeowners with a durable and aesthetically pleasant exterior.

Some clay roofs can last for a century, and many require only a minimal amount of maintenance.

That makes clay a viable option compared to similar materials like terra cotta, fired clay, molded concrete, or slate.

Clay tile roofs have many attractive characteristics and properties including:

1. Longevity

Clay roof tiles have a longer lifespan than many other materials. These roofs canhave a service life of as long as a hundred years. Even on the low end, you can expect at least 50 years out of a clay tile roof. This is because the tiles are built to be nearly indestructible and resistant to the corrosive elements.

2. Low Maintenance

Compared to other roofing materials, clay tiles require less maintenance, which can lower the total cost of ownership. The most common type of roof material is traditional tiles

3. Durability

Clay tiles do not rot and they're fire and insect-resistant. This durability make them not only structurally reliable but attractive for many years to come.

4. Weather resistance

Other materials expand and contract to a greater degree when extreme conditionsoccur. In contrast, clay maintains the roof's integrity by withstanding the most extreme hot and cold weather events. They are also able to resist the harmful ultraviolet radiation from the sun.

Better solar reflectiveness -

Unglazed, red terra cotta is the most reflective type of clay tile roofing. It reflects around 33% of all sun rays. A typical asphalt roof will only reflect 5 - 15% of those rays.

Higher thermal mass -

What this boils down to is clay tiles are capable of dispersing heat at night, instead of releasing all the heat during the daytime and potentially overheating the home. This works hand in hand with the better insulation properties to give your home better energy efficiency. Compared to asphalt tiles, they provide:

5. Insulation

Air freely circulates beneath these tiles, which regulates rooftop temperatures, helping maintain temperatures inside the home.

6. Aesthetics

The style for clay tile roofs is inspired by Spanish and Mediterranean designs. This appearance complements a variety of sidings. For example, a clay tile roof can enhance the look of brick or stone sidings, making it compatible with the most trending design styles for homes.

Accessories

Accessories Tiles can be used throughout the roofing structure and in combination with any of our other tiles.

Traditional Tiles

Traditional Terracotta Tiles are often used in roofing and have a simple, but effective design to enhance the quality of your structure.

Tailor Tiles

Tailor Tiles have a simple, yet effective design. These tiles can elevate the overall look and build for any project.

Decorative Tiles

Our Roofing Tiles are specially crafted to be weather resistant and are available in numerous designs so you can choose something that works for you.

Ceiling Tiles

Ceiling Tiles are designed to give any room a stylish look while also keeping it insulated and are traditionally used under a fabricated roof or roofing tiles.

Elevation Bricks

Efficient and strong, our Elevation Bricks can be a great addition if you are designing a rustic or modern structure.

Flooring Tiles

It can be used in a variety of rooms in the home, including the kitchen, living room, bedroom & in the outdoors too.

Terracotta Jaali

Our most loved tiles are the Terracotta Jaali designs, available in over 15+ designs.

These tiles are decorative tiles, which give any room an air of authenticity and elegance.
